

## Terms and conditions files - CustomerID

The terms and conditions to be displayed in user registrations are stored in a file called "terms\_XX.html", where "XX" is the two-letter language code indicating the language the terms and conditions have been written in. The terms and conditions file will be displayed to the user verbatim, and thus should generally be a valid HTML file. Like the other configuration files, the file "terms\_XX.html" has to be placed in the 'custom' directory at the base directory of Ubisecure CustomerID.
