

Mandate configuration - CustomerID

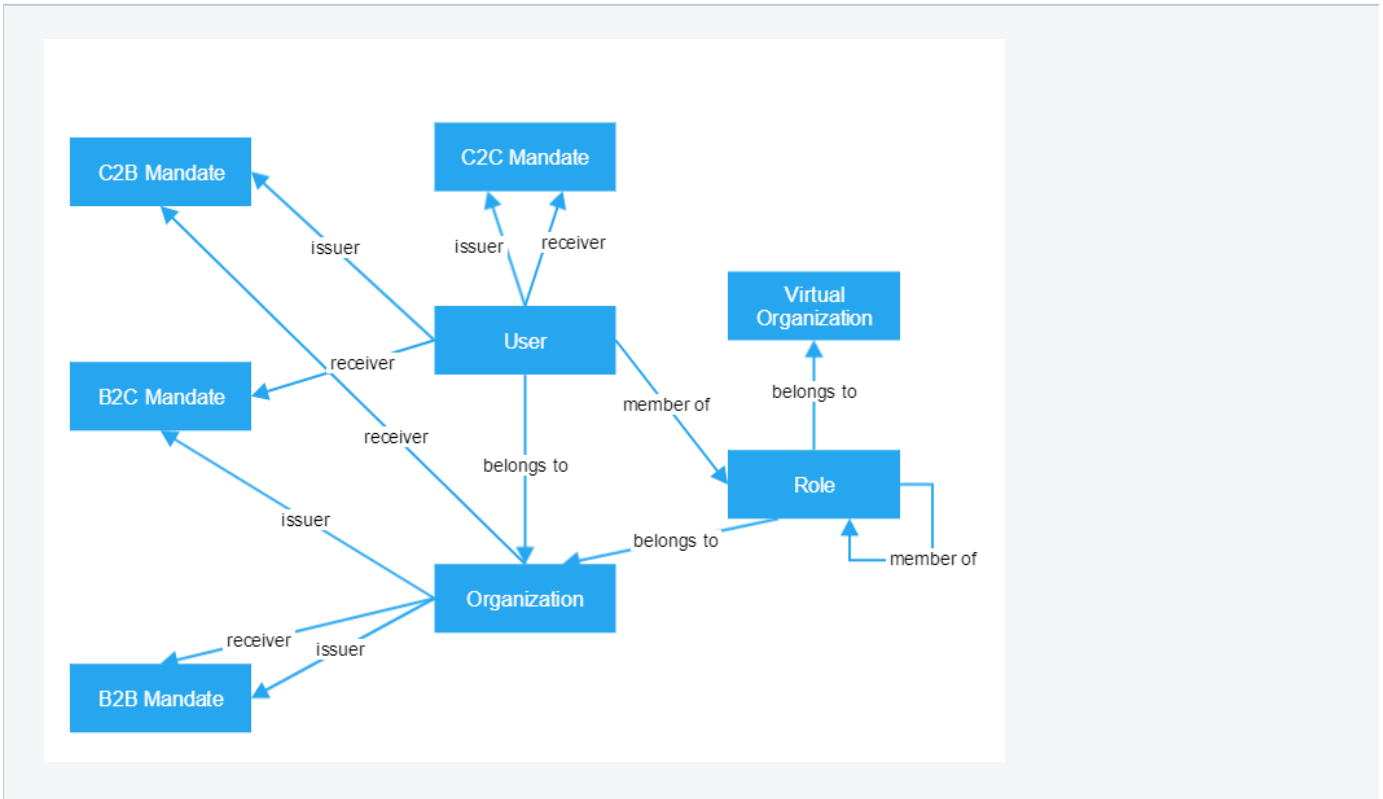

Figure 6. Simplified Conceptual Model with Member Of and Mandates

These configurations are available in the `eidm2.properties` file.

mandate.naming

This property defines if it is possible to give names to mandates in UI. There are two possible values:

- `true`: Mandate naming is used. Also sets mandate name as required information in UI.
- `false`: Mandate naming is not used. This means that mandate names are not given by users. Mandate names are automatically generated.

Default is `false`.

Example:

```
mandate.naming = false
```

mandate.roles.allowed

This property defines the roles that are allowed in mandates.

Default is `<none set>`

Example:

```
mandate.roles.allowed = Role1, Role3, Role4, Role6
```

mandate.person.registration

This property defines the name of the registration for new users that are invited to register into the system when someone gives them a person mandate.

Default is `person`

Example:

```
mandate.person.registration = person
```

mandate.organization.registration

This property defines the name of the registration for new users that are invited to register into the system when someone gives them an organization mandate.

Default is `organization`

Example:

```
mandate.organization.registration = organization
```

mandate.receiver.approval

This property defines if mandate receivers approve the mandates or if they are automatically assigned without the need for the receiver to approve them. There are two possible values:

- `true`: The receiver of a mandate needs to approve the mandate.
- `false`: The mandate is received without the need for the receiver to approve it.

Default is `true`.

Example:

```
mandate.receiver.approval = true
```

mandate.validate.companyid

This property defines if the organization name should be in the Finnish company ID format when targeting mandates to organizations. There are two possible values:

- `true`: Organization name needs to be in the Finnish company ID format.
- `false`: Organization name can have any format.

Default is `true`.

Example:

```
mandate.validate.companyid = true
```
