

Update SAML metadata that include multiple SAML entities

When trying to update SAML metadata that include multiple entities, described in the metadata.xml as `<EntitiesDescriptor>` you might observe the following error in SSO Management UI.

The reason is that Ubisecure SSO is unable to read multiple entities and some changes are needed to the metadata.xml in order to be able to update it to the SSO Management UI. Below we have described the lines needed to be altered to have valid metadata that Ubisecure SSO can read.

In this example we are using [Suomi.fi updated SAML metadata](#) to take into use `uusi.tunnistus.fi/idp1` entityID. After these modifications you should be able to update the modified metadata.xml to SSO Management UI and start using the new keys and endpoints published by [Suomi.fi](#).

Example of updated SAML idp-metadata.xml, below is explained in more details which parts have been changed:

Updated idp-metadata.xml (should only be used as reference)

```
