

validation.json configuration file - CustomerID

The `validation.json` configuration file contains different user attribute validation configurations. Changes require a server restart. There is a template for this file in the installation package:

- Windows: `C:\Program Files\Ubisecure\customerid\tools\examples\custom\template_validation.json`
- Linux: `/usr/local/ubisecure/customerid/tools/examples/custom/template_validation.json`
