

protection.properties configuration file - CustomerID

The `protection.properties` configuration file contains different user authentication checking configurations. Changes require a server restart. There is a template for this file in the installation package:

- Windows: `C:\Program Files\Ubisecure\customerid\tools\examples\custom\template_protection.properties`
- Linux: `/usr/local/ubisecure/customerid/tools/examples/custom/template_protection.properties`
