

# Two node installation - CustomerID

## Guides

Ubisecure CustomerID can be installed on two different operating systems: Windows and Linux. We provide separate installation instructions for a two node Ubisecure CustomerID installation for these operating systems:

- [Two node installation on Linux - CustomerID](#)
- [Two node installation on Windows - CustomerID](#)

## Firewall considerations

Make sure that your firewall does not block traffic between these needed ports:

- Proxy Server to CustomerID Wildfly nodes, default port 7443
- CustomerID Wildfly nodes to PostgreSQL Server configured port, default port 5432
- CustomerID slave node Wildfly domain host to CustomerID master node Wildfly domain controller, default port 9999
- CustomerID Wildfly nodes to the mail server, default port 25
- CustomerID Wildfly nodes to LDAP configured port, default port 389

Check also [Firewall considerations - SSO \(linux\)](#) and [Windows reverse proxy installation - SSO](#).
