

Installation - CustomerID

This section describes how to install Ubisecure CustomerID.

First here are the requirements for performing any kind of Ubisecure CustomerID installation:

- [CustomerID Installation Requirements](#)

Also note [Security considerations for production environments - CustomerID](#), which are related to all CustomerID installation types.

Ubisecure CustomerID can be installed in two different ways: single node or two node. A single node installation is good when learning, evaluating or testing Ubisecure CustomerID. In most production cases a two node installation should be preferred.
