

# Help files - CustomerID

Ubisecure CustomerID user interfaces include context sensitive help files that can be accessed by clicking on the **Help** link. There are three user interfaces that have different help files:

```
help_admin_XX.html  
help_selfservice_XX.html  
help_unauthenticated_XX.html
```

In each of these, "XX" is the two-letter language code indicating the language the help file has been written in. Help files may be fully replaced. However, the HTML anchors should be included to ensure the valid linkage between the user interface tabs and the help file titles remains. If no custom help files exist, the default help that is supplied with Ubisecure CustomerID will be used.
